Education

Ph.D. Energy, Environmental, and Food Economics, Pennsylvania State University	2025 (Expected)
M.S. Civil Engineering, Zhejiang University	Dec. 2019
B.E. Civil Engineering, Zhejiang University	Jun. 2016

Research Interests

Environmental Economics, Labor Economics, Urban and Real Estate Economics, Energy Economics, Empirical Industrial Organization, Causal Inference

Teaching Fields

Microeconomics, Econometrics, Environmental and Resource Economics, Urban and Land Use Economics, Energy Economics, Geographic Information Systems, Applied Computational Economics, Empirical Industrial Organization

Job Market Paper

Drought responses in the Western United States: Household location choice and housing market feedback.

Abstract: As the threat of climate change intensifies, the Western U.S. is expected to experience more frequent and severe droughts. This looming crisis underscores the need to understand how households may adapt. In this study, I apply a residential sorting model to examine how drought-induced water shortages influence household location choices in the region. My findings are multifaceted: First, households experience significant disutility from living outside their birth states, with preference varying by demographics. Second, water shortages influence household location decisions by both lowering utility and raising rents. This prompts households to relocate to areas where higher net incomes and other desirable amenities can offset these adverse effects. Third, households are willing to pay \$0.12 to avoid an additional gallon of unmet water demand annually, with elderly households and homeowners willing to pay more. This study emphasizes the crucial role of megadroughts in shaping population distribution in the Western U.S.
